

A close-up photograph of several stacked wooden planks, showing their natural grain and texture. The planks are arranged in a slightly overlapping manner, creating a sense of depth. The lighting is soft, highlighting the natural colors of the wood, ranging from light tan to a darker, weathered grey. In the top right corner, there is a logo consisting of a stylized orange 'M' above a horizontal line, followed by a period and the word 'metrica' in a white, lowercase, sans-serif font.

## metrica: your way to perfection

Your way to perfection – let's find it together. This work offers you an ideal opportunity for insight, as it showcases the thing we most love to do, and are best able to do: Planning, making and fitting exquisite interiors for mega yachts and luxury residences.

This book focuses on our key asset: our employees. They work together in an environment of mutual respect, and consider their work to be a vocation. These true "metricans" are always meticulous in their performance and punctuality, as they are characterized by high standards of quality, attention to detail, and an ability always to learn new skills.

Creating the extraordinary is in our company's DNA. Follow us as we bring your design to life, achieving the highest degree of perfection. Immerse yourself in metrica's world, where there is only one final goal: To delight you with the visual, tactile, and functional result of our work.

The perfect outcome is the culmination of a perfect process, which you can now see in development, image by image.

A handwritten signature in black ink, appearing to read 'Kai Dittmar', with a stylized flourish at the end.

*Kai Dittmar*

## PERFECTION BEGINS IN THE MIND – YOUR MIND!

It's your way to perfection, so it always starts with you, with your own mind. Nobody knows better than you how your mega yacht or luxury residence should look. Our job is to understand your ideas as precisely as possible and to transfer them into our own heads.

That's why we make careful inquiries right from the start and engage with your ideas in real depth. What materials do you want to surround you? What surface textures and color flows do you have in mind? What kind of interior and object design do you want to achieve? But also: What video and audio technology do you want to install? What room and area arrangements would you like to captivate your guests – and yourself?

Whatever your heart is set on, we will make it a reality. The more vividly we see your vision, the greater degree of perfection we can attain in everything that follows. The first step is for us to translate your ideas into detailed numbers, structures, disciplines, processes, and timetables. From these we develop an estimate which forms the foundation for all subsequent processes – diligently calculated to ensure it is as reliable as possible.

A precision landing, accurately scheduled to safeguard security of investment, adherence to deadlines, and quality of execution.

## THORSTEN KATTENBUSCH

DIRECTOR OF CALCULATION

*"I'm constantly fascinated by the high degree of creativity our clients bring to developing their vision of a luxury residence or mega yacht. No two drafts are alike, and it's always a fun job to capture these extraordinary ideas and turn them into a valid costing basis."*

## GERMAN ENGINEERING: A PASSION FOR DETAIL

Interior design is highly complex. On the one hand, the aesthetic design of the visible surfaces must be executed to the highest degree of quality, reflecting our customer's ideal vision even in its tiniest details. On the other, when building the whole infrastructure our engineers have to think ahead in terms of the supply technology that will invisibly underpin your desired interior.

That's why we discuss the project with all the relevant specialists early in the process, and take their needs into account when building the floor, wall, and ceiling structures: What electric cables, air conditioning hoses, and water pipes have to be laid, and where? Where should sub-distribution units and transformers be placed? And how do we plan monitoring

and control systems in such a way that they are accessible and easy for service staff to operate?

And that's not all that needs to be considered: Fire safety, soundproofing, vibration protection, and other necessary and legally mandatory safety systems – we plan all of it out with great care, in all its complexity and mutual project dependencies, and then test the outcome in a multi-tiered process. This gives our project management team a valid toolkit to use for combining and synchronizing the various specialist processes in a way that is efficient and punctual.

German engineering, perfect foresight, and a passion for detail.

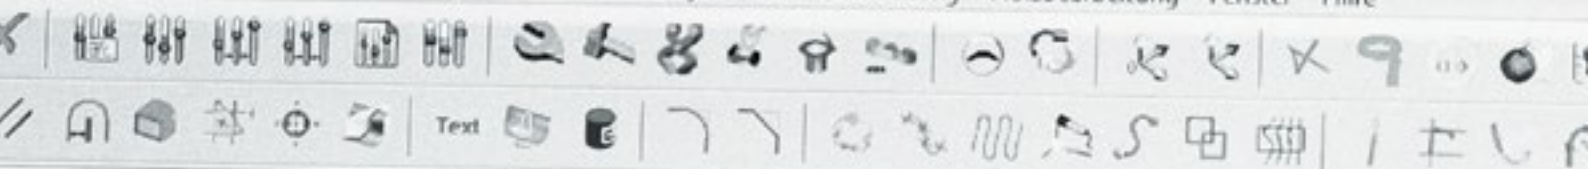

## PETER RABE

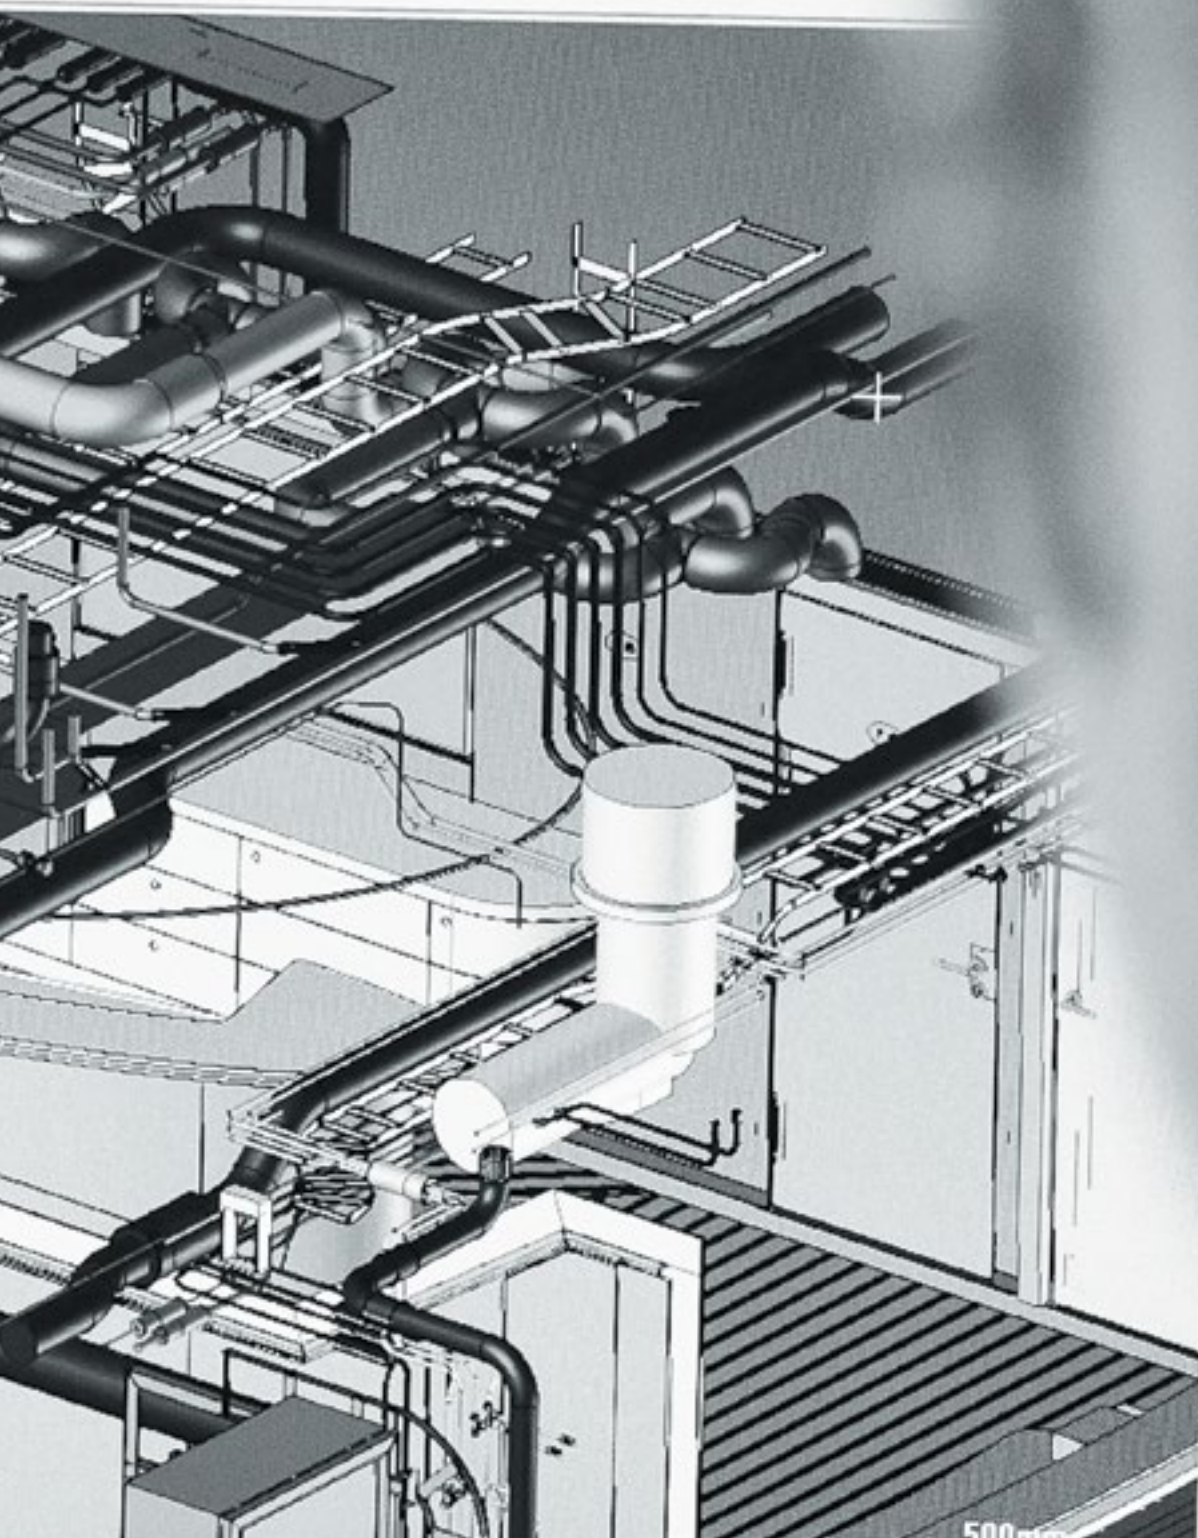

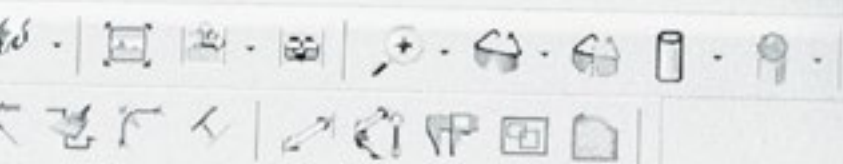

PROJECT MANAGER

*"The continual challenge of achieving a perfect end product motivates us every day, with every single "metrican" playing a key part in a supremely professional team, working together like a finely tuned clock. Without the contribution of each and every one, metrica's products would not be what they are. Quality, to the very highest standard."*

## WE GIVE OUR BEST. WITH THE VERY BEST!

Quality is a certainty: Ultra-modern machines, at the cutting edge of technology and with flexible material treatment options, are essential to our work. But the highest standards of perfection require one other very special ingredient: The expertise, manual skills and trained eye of our employees.

That's why we work with only the very best carpenters, joiners, and woodworkers who have already proven their skills, and who bring the best possible references. They carry out all the woodworking tasks on our projects, accurately, punctually, and always to the very highest standards.

These high standards of quality also apply to our external partners. Over many years, we've built a network of top-notch suppliers

whose job is to make components from the finest material – perhaps selected high-quality metals, or hand-finished crystal. We've known these companies for a long time, and they prove their superior quality over and over again, on project after project.

All craftspeople and stakeholders are integrated into our project management plan, and they produce and deliver according to precisely coordinated guidelines, all doing their utmost for the perfect process.

*“Strive for perfection in everything you do. Take the best that exists and make it better. When it does not exist, design it.”*

SIR FREDERICK HENRY ROYCE  
ENGLISH ENGINEER AND CAR DESIGNER

## EXTRAORDINARY VISUALS – FOR EXTRAORDINARY PEOPLE

Interior design expresses personality. And an extraordinary interior is the expression of an extraordinary personality. That's why we pay particular attention to the emotional quality of our surfaces. It's only by meeting your expectations in terms of color design, texture, and visual surface molding with absolute precision that we can transform a made by metrica interior into "your" interior.

So creating perfect surfaces is another key step on your way to perfection. To build a perfectly smooth, close-pored wooden surface that gives a sense of depth in its visual impact requires numerous work steps. It all starts by alternately priming and polishing the wood surface repeatedly; followed by application of a high-grade lacquer, which is also repeated several times.

The next phase of the process sees the workpiece minutely examined for the tiniest unevenness or indentation, and if any are found they are eliminated using precision tools, an exact eye, and a finely honed feel for the perfect surface.

Only when we have achieved the optimum result do our specialists start to polish the surfaces to a high shine. Here too, we rely on our employees' combination of experience and sensitivity – a combination far superior to any automated surface finishing process.

## MARWAN AL-KAZAK

SURFACE DEPARTMENT

*"As well as years of experience, surface finishing also requires a high level of sensitivity to the needs of the workpiece. Both give me assurance when it comes to deciding which polish and how much contact pressure I should use in order to create the exact surface visual that our customer wants."*

## DELIVERY QUALITY IS PRODUCT QUALITY

On your way to perfection, we go that special step further in treating delivery quality as part of overall product quality: For us, a finely finished, visually appealing product is only truly perfect when the supply process also supports us to carry out on-site assembly as efficiently and intelligently as possible.

That's why all components – whether manufactured in-house or by our partners – come together in our factory, where they receive an identification number which includes a digital bar code. From that moment, our in-house project management team knows where each component is at any time.

This allows us to deliver the components precisely and punctually, in accordance with

how the assembly process is advancing. This enables us to reduce on-site storage costs to a minimum. It also allows us to compensate for potential unforeseen changes to the plan by delivering other components early, so our assembly team can continue working on-site no matter what.

A precisely timed mechanism where all the specialist processes fit seamlessly together.

## SMART PROCESSES, FASTER ASSEMBLY

It's like any race: Success is decided in the final straight. And it wouldn't be a perfect way if it weren't perfect right to the end. That's why, during the assembly process, we work exclusively with a team of hand-picked specialists, individually selected for the project requirements.

Our specialists have already proven their mettle in a number of projects, and have absolutely internalized our quality standards for installation, so it's simply second nature to them. Before starting work they receive a comprehensive overview of the project conditions and carefully planned work processes, which have the effect of instructing every individual employed on the construction site as if perfectly guided by an invisible mechanism.

Acceptance of goods, their distribution and provisioning on the construction site, as well as the assembly process itself – the experts work shoulder to shoulder on every task: time-efficient, exact to the millimeter, and supremely precise. It's exactly the same when working together with other specialists. As the project managers in charge, we coordinate all the participants, integrating them seamlessly into work processes.

The result? Smart, efficient work processes with significantly faster assembly times.

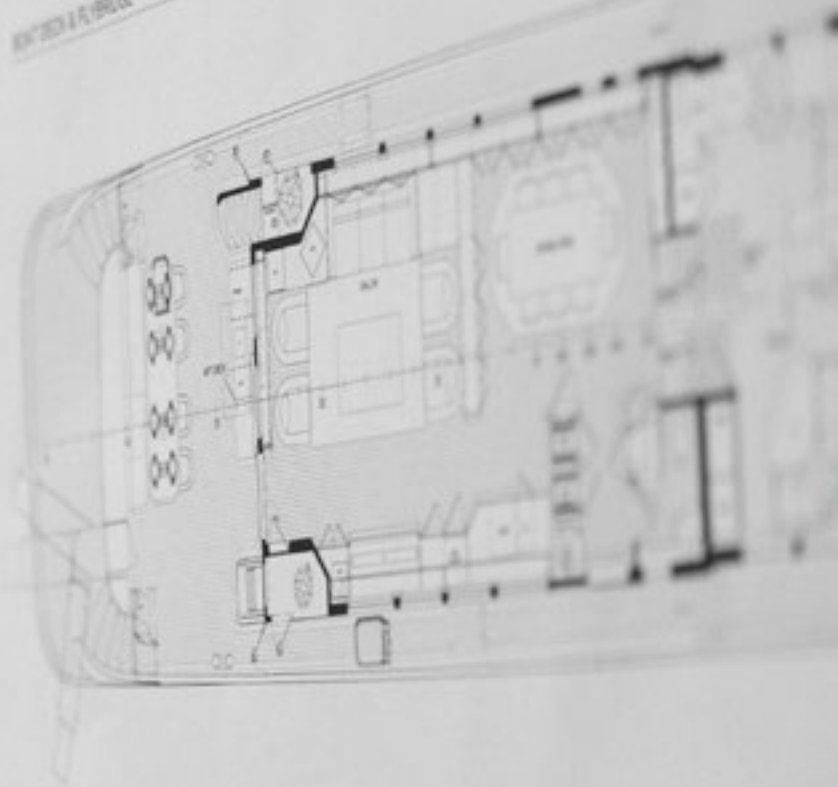

SECTION 1-1 (BRIDGE)

SECTION 2-2

## CHRISTIAN SCHLUFF

DIRECTOR OF INSTALLATION

*"I need just three things for a seamless assembly process: A process sequence, thoroughly planned in advance with all specialist processes integrated; a highly flexible project management team; and an experienced assembly team who have signed up heart and soul to our vision of perfection."*

## ENJOY YOUR WAY TO PERFECTION

The perfect outcome is the culmination of a perfect process.

## THE ENDING IS JUST THE BEGINNING OF SOMETHING NEW

The demands our customers make on our services are as individual as the customers themselves. But they all agree on one thing: For them, perfection is not just a single event, but a whole way of life that manifests in everything they do. That's why, from their point of view, the ending is always the beginning of something new, and the path behind them blends seamlessly into the new path ahead: A new way to perfection.

We'll gladly follow that path with you all over again. Whether it's a luxury residence or a mega yacht, we're at your side with a wide range of high-quality global services, available 24/7, delivering real added value. We'll introduce your staff to all the control and operating systems, deliver comprehensive training in the care of all

surfaces and materials, and provide a regular maintenance service.

And when it comes to the next project, whether it's retrofit, refit or touch-up, we want to inspire you all over again with our passion, our commitment, and our love for the extraordinary. Because, as they say: Perfection is a whole way of life that manifests in everything you do.

We look forward to hearing from you!
